Jasper Kim Diola

Software Engineer | Java & AWS

Binangonan, Rizal, PH | jasperdiola07@gmail.com | +63 960 312 2168 | linkedin.com/in/jasperdiola

PROFESSIONAL SUMMARY

Software engineer with close to five years of experience building full-stack and backend systems in Java, Spring Boot, and Angular. Containerizes and deploys microservices to AWS using Docker, Kubernetes, and Helm, and instruments services for observability with Prometheus and Grafana. Comfortable owning features end to end, from Angular interfaces through REST APIs to the data layer, and has mentored junior developers while working in agile teams.

TECHNICAL SKILLS

Languages	Java, TypeScript, HTML, CSS
Frameworks	Spring, Spring Boot, Angular, Bootstrap
Cloud & DevOps	AWS (ECR, EKS, RDS, Lambda, CloudWatch), Docker, Kubernetes, Helm, CI/CD, Azure DevOps
Observability	Prometheus, Grafana
Practices & Tools	RESTful API design, Unit & Integration Testing, Git, Agile/Scrum

PROFESSIONAL EXPERIENCE

Arch Global Services Philippines March 2026 - Current

Software Engineer | Remote

- Build and maintain internal platform services and developer tooling used by engineering teams across the business, owning features end to end from Angular interfaces through Spring Boot REST APIs to the data layer.
- Design and implement RESTful APIs in Spring Boot, covering request validation, error handling, and integration with downstream services.
- Build reusable, responsive components in Angular 20 and TypeScript, extending the shared component library so platform interfaces stay consistent as they grow.
- Write unit and integration tests across both layers and review teammates' code to catch regressions before release.

Trend Micro August 2025 - March 2026

Backend Engineer | Hybrid

- Built and containerized microservices into Docker images, pushed to Amazon ECR, and deployed to EKS using HELM for high availability and smooth rollouts.
- Implemented full observability with Prometheus by instrumenting Java services (counters, gauges, histograms) to track latency, API usage, and system performance.
- Integrated Grafana dashboards for real-time monitoring, alerting, and actionable insights.
- Provisioned RDS with automated backup mechanisms and set up CloudWatch alarms with Lambda for proactive detection and remediation of data integrity issues.

WeServ System International Inc. (Fujitsu) December 2021 - July 2025

Application System Engineer | Remote

- Developed responsive, interactive, and user-friendly web pages using Angular, TypeScript, and Bootstrap, ensuring alignment with project requirements and consistent cross-device design.
- Designed intuitive UI/UX interfaces and reusable modular components to enhance user satisfaction, maintainability, and scalability of applications.
- Integrated external APIs (e.g., ServiceNow) to fetch dynamic data, handling responses, exceptions, and rate limits effectively.
- Implemented rigorous testing (unit and integration) and best practices in Git version control to ensure high-quality, reliable, and maintainable code.
- Built an automation tool in Java for Azure DevOps that handled organization registration, settings updates, and user management for thousands of users, with robust exception handling and retry mechanisms.

- Developed a verification tool to ensure organizational compliance with expected settings and correct user access, integrating SharePoint Online for data retrieval and reporting.
- Streamlined CI/CD pipelines for automation tools, reducing manual operations, improving productivity, and optimizing release processes.
- Participated in agile workflows and mentored three junior developers, sharing technical knowledge and leading problem-solving initiatives across the team.

FastTrack Solutions Inc. March 2019 - December 2019

Business Analyst Consultant - Trainee | Onsite

- Collaborated with cross-functional teams to gather requirements, design solutions, and develop interactive dashboards and reports (SAP Lumira Designer & Web Intelligence) for seamless project execution.
- Managed multiple projects end-to-end, conducting comprehensive testing, UAT, training, risk mitigation, and maintaining detailed documentation to deliver high-quality solutions.

EDUCATION

Bachelor of Science in Information Technology - University of the East - Manila (2018)
